PERA Safety Demo Q&A

- You mentioned this is for PIs. Please instruct how lab members or admins can fill out forms and route to PI for approval and official submission.
    - Any lab member or admin can create a protocol and add someone as the PI of the protocol. They can then fill out all information on the protocol up until submission. The PI will then need to validate and submit. There is not an approval process necessarily but the best way has been to have the admin add a comment to the protocol that sends a notification to the PI to approve.
